

Industrial & Commercial Electric Demand Response

Recent federal legislation and regulatory initiatives have focused national energy policy on promoting energy conservation. Many organized wholesale electricity markets, including the organized market in which the Borough of Chambersburg is located and participates – PJM Interconnection, LLC (“PJM”) – have begun implementing demand response programs as a way of encouraging a reduction in electricity usage.

PJM’s demand response program offers value for those end-use customers with the ability, on relatively short notice, to reduce their electricity usage for a certain period of time, when called on to do so by PJM.

By ordinance, electric customers of the Borough of Chambersburg cannot participate in such programs except through programs offered by the Borough. The Borough of Chambersburg offers participation in such programs and would be pleased to assist you in evaluating the potential benefits, obligations, and requirements of such participation as well as actually registering your business for participation in the program should you choose to participate.

If you are interested in learning more about the Borough’s demand response programs, please contact Ron Pezon, Electric Superintendent at 717-261-3238.
